Sequence 12545, Application US/09960352
Patent No. US20020137139A1
GENERAL INFORMATION:
APPLICANT: Wesley C.
APPLICANT: Tao, Nengbing
APPLICANT: Mathialagan, Magappan
TITLE OF INVENTION: NUCLEIC ACID AND OTHER MOLECULES ASSOCIATED WITH LACTATION AND TITLE OF INVENTION: MUSCLE AND FAT DEPOSITION
TITLE OF INVENTION: US/0298)C
CURRENT APPLICATION NUMBER: US/09/960,352
CURRENT FILING DATE: 2001-09-24
NUMBER OF SEQ ID NOS: 15112

Sequence 8757, Application US/09960352
Patent No. US20020137139A1
GRNERAL INFORMATION:
GRNERAL INFORMATION:
APPLICANT: Warren, Wesley C.
APPLICANT: Byatt, John C.
APPLICANT: Byatt, John C.
APPLICANT: Mathialagan, Nagappan
APPLICANT: Mathialagan, NaCLE ADD END OTHER MOLECULES ASSOCIATED WITH LACTATION AND TITLE OF INVENTION: MUSCLE AND FAT DEPOSITION
FILE REPRESENCE: 16511.006/37-21(10298)C
CURRENT APPLICATION NUMBER: US/09/960,352
CURRENT FILING DATE: 2001-09-24
                                                                                                                                                                   GENERAL INCORMATION:
APPLICANT: Warren, Wesley C.
APPLICANT: Tao, Nengling
APPLICANT: Tao, Nengling
APPLICANT: Byatt, John C.
APPLICANT: Mathialagan, Nagappan
ITILE OF INVENTION: NUCLEIC ACID AND OTHER MOLECULES ASSOCIATED WITH LACTATION AND
ITILE OF INVENTION: MUSCLE AND FAI DEPOSITION
FILE REFERENCE: 16511.006/37-21(10298)C
CURRENT APPLICATION NUMBER: US/09/960,352
CURRENT PILING DATE: 2001-09-24
NUMBER OF SEQ ID NOS: 15112

10CATION: 3107 of the
10CATION: 3107 of the
10CATION: 3108 "n" refers to a nucleotide at position 3107 of the
10THER INPORMATION: Cambridge Reference Sequence (CRS, Anderson et al.
10THER INFORMATION: 1981 Nature 290:457-465), later determined to be
10THER INFORMATION: absent from the human mtDNA sequence according to
10THER INFORMATION: the revised CRS (LCRS, Andrews et al. 1999 Nature
10THER INFORMATION: Genetics 23:147); "n" therefore represents a
10THER INFORMATION: single nucleotide deletion at a position corresponding to
10THER INFORMATION: nucleotide 3107 of SEQ ID NO:1 as provided herein.
                                                                                                                                                                                                                               15383
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            recearacarresacadacerastreartearterasesesecraeteagrasacase 15264

OTHER INFORMATION: "n" refers to a nucleotide at position 3107 of the OTHER INFORMATION: Cambridge Reference Sequence (CRS, Anderson et al. OTHER INFORMATION: 1981 Nature 290:457-465), later determined to be OTHER INFORMATION: absent from the human mtDNA sequence according to OTHER INFORMATION: the revised CRS (rCRS, Andrews et al. 1999 Nature OTHER INFORMATION: Genetics 23:147); "n" therefore represents a OTHER INFORMATION: single nucleotide deletion at a position corresponding to OTHER INFORMATION: nucleotide 3107 of SEQ ID NO:1 as provided herein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           15135 recegricadeccaaararearrereadegeceaedrarraeaaerraerareearreeden 15194

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 420
                                                   "n" refers to a nucleotide at position 3107 of the Cambridge Reference Sequence (CRS, Anderson et al. 1981 Nature 290:457-465), later determined to be absent from the human mcDNA sequence according to the revised CRS (rCRS, Andrews et al. 1999 Nature Genetics 23:147); "n" therefore represents a single nucleotide deletion at a position corresponding nucleotide 3107 of SEQ ID NO:1 as provided herein.

Funding for EST sequencing was provided by an INRA funding for EST sequencing was provided by an INRA funding for the CDNA library construction was provided by an EEC contract (BO14-CT95-0190).

The library was constructed by I. Hue, BDR, INRA, 78350

JOUY-EN-JOSAS. The double stranded cDNA was un-directionally cloned in a TA cloning vector. Deal is a SMART cDNA library. Insert size was between 450 and 3500 bp. Sequencing was done from the 5' end of
                                                                                                                                                                 EST 02-JUL-2004
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              67 ACATCGGTACAAACCTAGTAGAATGAATCTGAGGAGGGTTCTCAGTAGATAAAGCAACCC 126
